

Heat Resistant Wires and Cables

A Trusted Brand

The heat resistant wires and cables of Furukawa Electric Industrial Cable, including the lead wires for the equipment, has a proven track record as a heat resistant product. They are applied to the high temperature environment near the equipment to melt the steel or the glass.

This is embodied by the material development capability which has been cultivated in the Furukawa Electric Group business of more than a century, the structural design according to the customer needs and orders. In the future, we develop the product that the properties required in a variety of environments are enhanced and contribute to the advancement of the electrical machinery and equipment.

Lineup of Heat Resistant Wires and Cables

Product name	Code	Heat resistant temperature	Applied voltage	Major Applications	Page
Halogen free, flame retardant, flexible, cross-linked polyethylene insulated wire	EM-LMFC	110°C	600V 6600V	<ul style="list-style-type: none"> Wiring in the panel Equipment lead wire Power supply 	P.3 ~ 4
Silicon rubber insulated lead wire	LK	180°C	600V 3300V 6600V	<ul style="list-style-type: none"> Equipment lead wire Power supply 	P.5 ~ 6
Silicon rubber insulated, glass braided wire	LKGB	180°C	600V 3300V 6600V		P.7 ~ 8
Silicon rubber insulated, reinforced silicon rubber sheathed cab tire cable	KKCT	180°C	600V	<ul style="list-style-type: none"> Power supply Control 	P.8
Fluorine rubber insulated lead wire	LF	200°C	600V	<ul style="list-style-type: none"> Equipment lead wire Power supply 	P.9
Fluorine rubber insulated, fluorine rubber sheathed cable	LF-R	200°C	600V		P.9
Fluorine rubber insulated, fluorine rubber sheathed, stainless wire armored cable	LF-R-B	200°C	600V		P.10
Fluorine resin insulated wire	FUSSO-15	150°C	600V	<ul style="list-style-type: none"> Power supply Control 	P.11
	FUSSO-20	200°C			P.12
	FUSSO-26	260°C			P.13
	FUSSO-40	260°C (400°C)			P.14
VIBRAFLAME	—	260°C (1565°C)	600V	<ul style="list-style-type: none"> Power supply Control 	P.15 ~ 19

Note) The number in parentheses indicates the short time heat resistant temperature.

Halogen free, Flame Retardant, Flexible, Cross-linked Polyethylene Insulated Wires (EM-LMFC)

Despite being eco-material wires that take the environment into account, the product has an excellent flexibility in consideration of the workability during wiring.

Also, since EM-LMFC insulation has a heat resistance of 110°C, the permissible current is higher in comparison to IV which is the representative wire for the panel wiring.

By reducing the size of conductor, it contributes to the reduction of equipment size and cost.

[Features]

- Halogen gas is not generated during combustion and also it is the environment friendly product which does not contain RoHS restricted substance.
- Since it has an excellent varnish resistance, it can apply to the varnish insulation such as a motor and also can withstand the varnish drying treatment that is high temperature and short time.
- It has a heat resistance of 110°C.
- The flame retardant property meets the requirement of JIS C 3005 4.26.2 b) (Inclined test).

Silicon Rubber Insulated Wires and Cables

Because silicon rubber has not only heat resistant property, but also superior brittleness property, it can be used at wide range of from low temperature to high temperature.

Also we have the product of crack resistance (LKGB), flexible cable applicable to curtain method (KKCT) and etc.

[Features]

- Silicon rubber has an excellent environmental property because it does not generate a halogen gas during combustion.
- It has the heat resistance of 180°C.
- It can be used under low temperature because the brittleness temperature is -60°C.
- The flame retardant property meets the requirement of JIS C 3005 4.26.2 b) (Inclined test).
- It has the excellent properties of flexibility.

Please, do not use in a steam atmosphere because silicon rubber causes hydrolysis reaction.

Fluorine rubber insulated wires and Cables

Because fluorine rubber has the excellent properties of chemical resistance, solvent resistance and steam resistance, it can be used in a variety of environmental conditions.

In addition to above performances, because our fluorine rubber material has an excellent flexibility, it has also an excellent workability during wiring.

Also, we have the product which the crack resistance is considered (LF-R-B).

[Features]

- It has the heat resistance of 200°C.
- It has the excellent properties of oil resistance, solvent resistance and steam resistance.
- The flame retardant property meets the requirement of IEC 60332-1 and JIS C 3665-1 (Test for vertical flame propagation for a single insulated cable).

Fluorine Resin Insulated Wires

Because in addition to heat resistance, the fluorine resin has excellent performances such as oil resistance, chemical resistance, solvent resistance, steam resistance and etc., it can be used in a variety of environmental conditions.

Also, because the insulation thickness is thinner in comparison to the general rubber or plastic wires, it can contribute to the reduction of equipment size and weight.

[Features]

- It has the excellent properties of oil resistance, chemical resistance, solvent resistance and steam resistance.
- Because it has an excellent low temperature property, it can be used up to -100°C.
- The flame retardant property meets the requirement of UL 1581 1080, VW-1 Flame retardant test.
- Below table shows the heat resistant property and etc.

Product name	Heat resistant temperature	Type of Conductor	Type of insulator
FUSSO-15	150	Tin-coated annealed copper wire	ETFE
FUSSO-20	200	Tin-coated annealed copper wire	FEP
FUSSO-26	260	Nickel-coated annealed copper wire	PFA
FUSSO-40 ¹⁾	260°C 400°C ²⁾	Nickel-coated annealed copper wire	PTFE

Note) 1) Please, do not use in the high humidity atmosphere because the insulation resistance will be reduced.

2) It has the performance which withstands in the condition of 400°C x 30 minutes.

3) Multi-core cable will be the outside of the product in the category of Electrical Appliance and Material Safety Law and electrical equipment technical standard.

*(Calculation conditions) Single cable installed in the air, ambient temperature 90°C, Max. allowable conductor temperature 260°C.

VIBRAFLAME

This product is constructed by combining mica, organic polymer and etc. and it realizes an ultra-heat resistance that withstand the peak temperature of from -196°C to 1565°C (short time).

Even when the scatter of high temperature molten metal or glass happens, the equipment maintains the functions for short time. Therefore when accident occurs, the time to stop the machine is secured.

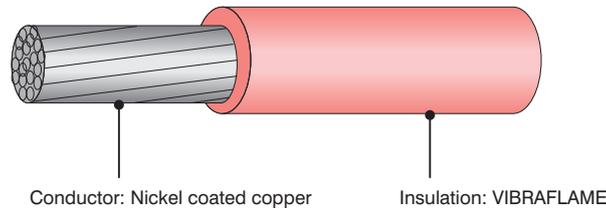

[Features]

- Secondary disaster due to the flame propagation can be avoided because of the flame retardant property and non-flame spread.
- It has an excellent workability on wiring because of the flexibility.
- It has the excellent properties of chemical resistance and solvent resistance.
- It has an excellent heat resistance and the long life time so that the frequency of cable replacement and the maintenance cost can be reduced.
- Continuous permissible temperature is from -90°C to 260°C and it can be used in a wide range of temperature.
- Flame retardant property meets not only the requirement of JIS C 3521 (Vertical tray combustion test), but also Belgium standard NBNC30-004 which is very severe testing condition.
 - NBNC30-004 testing conditions (Excerpt)
 - Gas burner temperature: 900+/- 50°C
 - Testing time: 3 hours
 - Mechanical shock interval: each 30 seconds

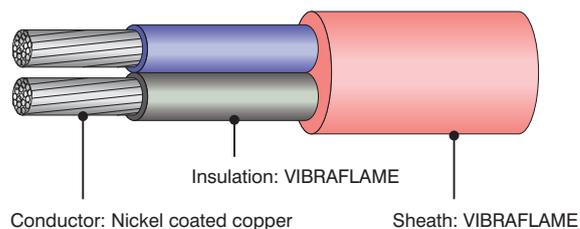

Note: 1) Please, do not use in a condition of high humidity atmosphere because the insulation resistance will be reduced.
 2) This product will be the outside of the product in the category of Electrical Appliance and Material Safety Law and electrical equipment technical standard.

Appendix

1. Current correction coefficient due to the ambient temperature

(1) EM-LMFC

If the ambient temperature is different from 40°C, please, multiply the current correction coefficient written in the below table to the current rating of EM-LMFC described in this catalog.

Ambient temperature (°C)	Current correction coefficient						
10	1.20	35	1.04	60	0.85	85	0.60
15	1.16	40	1.00	65	0.80	90	0.53
20	1.13	45	0.96	70	0.76	95	0.46
25	1.10	50	0.93	75	0.71	100	0.38
30	1.07	55	0.89	80	0.65	105	0.27

(2) Silicon rubber insulated wire

If the ambient temperature is different from 90°C, please, multiply the current correction coefficient written in the below table to the current rating of Silicon rubber insulated wire described in this catalog.

Ambient temperature (°C)	Current correction coefficient						
10	1.37	60	1.15	100	0.94	140	0.67
20	1.33	70	1.11	110	0.88	150	0.58
30	1.29	80	1.05	120	0.82	160	0.47
40	1.25	90	1.00	130	0.75	170	0.33
50	1.20						

(3) Fluorine rubber insulated wire

If the ambient temperature is different from 90°C, please, multiply the current correction coefficient written in the below table to the current rating of Fluorine rubber insulated wire described in this catalog.

Ambient temperature (°C)	Current correction coefficient						
10	1.31	60	1.13	110	0.90	160	0.60
20	1.28	70	1.09	120	0.85	170	0.52
30	1.24	80	1.04	130	0.80	180	0.43
40	1.21	90	1.00	140	0.74	190	0.30
50	1.17	100	0.95	150	0.67		

(4) Fluorine resin insulated wires

① FUSO-15

If the ambient temperature is different from 90°C, please, multiply the current correction coefficient written in the below table to the current rating of Fluorine resin insulated wire described in this catalog.

Ambient temperature (°C)	Current correction coefficient						
10	1.53	50	1.29	90	1.00	120	0.71
20	1.47	60	1.22	100	0.91	130	0.58
30	1.41	70	1.15	110	0.82	140	0.41
40	1.35	80	1.08				

② FUSO-20

If the ambient temperature is different from 90°C, please, multiply the current correction coefficient written in the below table to the current rating of Fluorine resin insulated wire described in this catalog.

Ambient temperature (°C)	Current correction coefficient						
10	1.31	60	1.13	110	0.90	160	0.60
20	1.28	70	1.09	120	0.85	170	0.52
30	1.24	80	1.04	130	0.80	180	0.43
40	1.21	90	1.00	140	0.74	190	0.30
50	1.17	100	0.95	150	0.67		

③ FUSO-26, FUSO-40

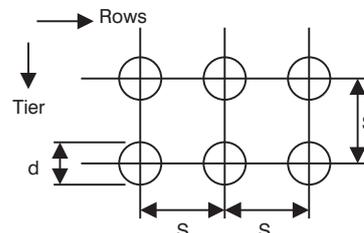

If the ambient temperature is different from 90°C, please, multiply the current correction coefficient written in the below table to the current rating of Fluorine resin insulated wire described in this catalog.

Ambient temperature (°C)	Current correction coefficient						
10	1.21	80	1.03	140	0.84	200	0.59
20	1.19	90	1.00	150	0.80	210	0.54
30	1.16	100	0.97	160	0.77	220	0.49
40	1.14	110	0.94	170	0.73	230	0.42
50	1.11	120	0.91	180	0.69	240	0.34
60	1.08	130	0.87	190	0.64	250	0.24
70	1.06						

2. The reduction rate of permissible current in case of multiple wire installation

If multiple cables are installed in the air or the culvert, please, multiple the reduction rate shown in the table below to the current rating for single cable installation.

(wire) center distance	Tier	1					2						
	Rows	1	2	3	6	7-20	2	3	4	5	6	7	8-20
S=d		1.00	0.85	0.80	0.70	0.70	0.70	0.60	0.60	0.56	0.53	0.51	0.50
S=2d		1.00	0.95	0.95	0.90	0.80	0.90	0.90	0.85	0.73	0.72	0.71	0.70
S=3d		1.00	1.00	1.00	0.95	—	0.95	0.95	0.90	—	—	—	—

3. The properties of rubber and plastic materials

Item	Material	Cross-linked polyethylene	ETFE	PFA	EP rubber	Chloroprene rubber	Silicon rubber
Specific gravity		0.92-0.93	1.7	2.1-2.2	1.3-1.4	1.4-1.6	1.2-1.7
Electric properties	Breakdown voltage (kV/mm)	30-50	20-30	15-30	30-45	15-25	20-30
	Volume resistivity ($\Omega \cdot \text{cm}$)	10^{17}	10^{16}	10^{18}	10^{15}	10^{7-12}	10^{14-15}
	Permittivity	2.3	2.6	2.1	4-5	7-10	3-4
	Dielectric tangent (%)	0.03	0.02	0.02	1-2	less than 15	2-4
Flame resistance		×	◎	◎	×	○	△
Heat resistance		×	◎	◎	×	○	△
Heat deformation resistance		○	◎	◎	○	△	◎
Ozone resistance		◎	◎	◎	◎	△	◎
Weather resistance		△	◎	◎	○	○	○
Oil resistance		◎	◎	◎	△	△	△

◎ : Excellent ○ : Good △ : Acceptable × : Unacceptable

4. Minimum ordering lot

Type of cable	Minimum ordering lot (m)	
Silicon rubber insulated wire and cable	100	
Fluorine rubber wire	100	
Fluorine resin wire	Single core	200
	Multiple cores	100
VIBRAFLAME	50	

Please, contact us for EM-LMFC. It is in stock.
