

# TriBox

The TriBox Fiber Management Unit (FMU) is a unique and versatile wall or pole mountable device. The TriBox FMU can help you with those medium to large size cable management installations. Use it as an inside cable transition point in the enterprise building or as a FTTx distribution point in the OSP. This unique box packs many features into a small fiber management space. Install up to 144 single fusion splices while housing the adapters and connectors for administration in this sleek design. The unique angled door improves fiber management access and results in a box that can fit tight to an inside wall for improved closet layouts. A flexible design that solves many application problems.

TriBox
