

How to confirm that parts have been replaced

Thermal Strippers (Model: S218R) containing replacement parts will have a sticker that indicates that parts have been replaced. If you are uncertain whether parts have been replaced, please look for this sticker.

(1) Check the front face of the main body

A round, white sticker on the front face of the main body indicates that parts have been replaced.

This sticker will only be found on units with a serial number of 10001 - 11877 that contain replacement parts.

A round, white sticker here indicates that parts have been replaced

(2) Check the inside of the main body

After removing the battery cover, you will see a white, half-circle sticker on the internal circuit board. If this sticker is NOT white or there is NO sticker, the unit does NOT contain replacement parts.

A white, half-circle sticker here indicates that parts have been replaced
